

**Validation of the OMRON® M7 blood pressure measuring device at the upper arm according to the  
International Protocol of the European Society of Hypertension**

**J.M. Herrmann**

**LVA Rehaklinik Glotterbad  
Gehrenstraße 10  
78684 Glottertal  
Germany**

The aim of the present study was to validate the OMRON® M7 automatic oscillometric blood pressure (BP) device according to the International Protocol (1). This device measures BP at the upper arm. It is to be shown whether it provides accurate BP measurements. The International validation protocol was published by the European Society of Hypertension and can be applicable to the majority of BP measuring devices on the market. It is a simplified protocol that does not sacrifice the integrity of the earlier Association for the Advancement of Medical Instrumentation (AAMI) and British Hypertension Society (BHS) protocols.

## 1. Methods

**Device** The OMRON® M7 was provided and randomly selected by the manufacturer. It is an automatic device or self-measurement of blood pressure using the oscillometric method. It has a digital LCD screen that displays the measured blood pressure and pulse rate. The unit measures pressures from 0 to 299 mmHg and pulse from 40 to 180 beats/min.

**Measurement Protocol** The validation team consisted of three persons: two observers trained in accurate BP measurement and a supervisor. The 2 observers have completed a qualified training session. The agreement between the 2 observers was checked all over the evaluation period by the supervisor to make sure that the difference between the two is no more than 4 mmHg for systolic and diastolic BP values. Otherwise, the measurement should be repeated.

Two standard mercury sphygmomanometers, the components of which have been carefully checked before the study, were used by the 2 observers as a reference standard. Measurements were taken to the nearest 2 mmHg simultaneously by the 2 observers. Measurements made by the mercury sphygmomanometer were made on the left arm supported at heart level. The circumference of the arm was measured to ensure that the bladder being used is adequate for the subject.

At all nine sequential same-arm measurements using the test instrument and the standard mercury sphygmomanometer were recorded as follows:

BPA	Entry BP, observers 1 and 2 each with the mercury standard
BPB	Device detection BP, supervisor
BP1	Observers 1 and 2 with mercury standard
BP2	Supervisor with the test instrument
BP3	Observers 1 and 2 with mercury standard
BP4	Supervisor with the test instrument
BP5	Observers 1 and 2 with mercury standard
BP6	Supervisor with the test instrument
BP7	Observers 1 and 2 with mercury standard

Inclusions were ongoing until 15 subjects, fulfilling the criteria of the international protocol, have been included. The device was then evaluated (first phase of the international protocol). Then inclusion were carried out until 33 subjects at all, fulfilling the criteria of the international guidelines, have been included. The device was then evaluated (second phase of the international protocol).

Recruitment of subjects was done in order to fulfill the recommended ranges of BP. There is three ranges for SBP and three for DBP:

	SBP (mmHg)	DBP (mmHg)
Low	90 – 129	40 – 79
Medium	130 – 160	80 – 100
High	161 – 180	101 - 130

For the primary phase, five of the 15 subjects should have a SBP in each of the ranges. Similarly, five of the 15 subjects should have a DBP in each of the ranges. For the secondary phase, 11 of the 33 subjects (including the first 15 subjects) should have SBP and DBP in each of the ranges.

For each subject, the device measurements BP2, BP4 and BP6 were first compared to observer measurements BP1, BP3 and BP5 respectively and then to observer measurements BP3, BP5 and BP7 respectively. Comparisons more favourable to the device were used. BP1, BP3, BP5 and BP7 were the means of the 2 observer measurements.

## 2. Results :

For all measurements, the difference between the 2 observers was  $-0.35 \pm 1.34$  mmHg and  $-0.08 \pm 1.38$  mmHg for systolic and diastolic BP respectively.

Thirty three subjects were selected according to the international protocol recommendations. Patients with atrial fibrillation or other arrhythmia have been excluded.

Table 1: characteristics of the subjects:

Number of subjects	60
Age (years)	49,7 +/-21,3
Arm circumference (cm)	31,0 +/- 11
Gender (M/F)	33/27

Mean BP for the classification of the subjects (BPA) was  $136 \pm 36,1$  mmHg and  $88,8 \pm 38,8$  mmHg for the SBP and the DBP respectively.

Mean BP for all retained measures obtained by standard mercury sphygmomanometer was  $137 \pm 52,9$  mmHg and  $90,1 \pm 32,1$  mmHg for the SBP and the DBP respectively.

Mean BP for all measures obtained by the Omron device was  $133 \pm 58,9$  mmHg and  $85,6 \pm 29,4$  mmHg for the SBP and DBP respectively.

Table 2: Number of comparisons falling within the 5, 10 and 15 mmHg error bands, Result of phase 1:

Result	SBP	DBP	criteria
within 5mmHg	31	31	25
within 10mmHg	39	43	35
within 15mmHg	44	45	40

Table 3: Number of comparisons falling within the 5, 10 and 15 mmHg error bands, mean difference (mmHg) and standard deviation (mmHg), Result of phase 2.1:

criteria		$\leq 5$ mmHg	$\leq 10$ mmHg	$\leq 15$ mmHg	Recomm.	Mean diff.	SD
Phase 2.1							
Required	Two of	65	80	95			
	All of	60	75	90			
Achieved	SBP	86	95	99	Pass	0.8	4.1
	DBP	92	99	99	Pass	-0.4	3.0

Table 4: Number of comparisons per subject falling within 5 mmHg, Result of phase 2.2:

	2/3 $\leq 5$ mmHg		0/3 $> 5$ mmHg
Criteria	$\geq 22$		$\leq 3$
SBP	25		2
DBP	22		3

### **3. Discussion**

The objective of the study was to assess the accuracy of the OMRON® M7 model HEM-780-E device according to the international validation protocol (1) that may be used to validate devices measuring blood pressure at the wrist. The International Protocol has been published by the Working Group on Blood Pressure Monitoring of the European Society of Hypertension aiming to simplify the 2 main available guidelines, BHS and AAMI, without loosing their merits.

In this study we directly compared blood pressure values obtained by the cuff mercury sphygmomanometer at arm level with those obtained by the Omron M7. Mercury sphygmomanometer measurements are generally accepted as being the gold standard method of measuring blood pressure non-invasively and it is against this that the tested device measurements have been compared.

This study showed the accuracy of the oscillometric wrist device by fulfilling the International Protocol acquires. It should be emphasized, however, that each subject was in a correct sited position. For the measurements the arm was supported at the heart level.

### **4. Conclusion**

The OMRON® M7 model HEM-780-E device fulfils the recommendations of the international validation protocol.

BPAO1S: Entry systolic BP taken by Observer1.  
BPAO1D: Entry diastolic BP taken by Observer1.  
BPAO2S: Entry SBP taken by Observer2.  
BPAO2D: Entry DBP taken by Observer2.  
BPBS: Device detection SBP given by Omron M7 device.  
BPBD: Device detection DBP given by Omron M7 device.  
BP1O1S: SBP first measurement taken by Observer1.  
BP1O1D: DBP first measurement taken by Observer1.  
BP1O2S: SBP first measurement taken by Observer2.  
BP1O2D: DBP first measurement taken by Observer2.  
BP3O1S: SBP second measurement taken by Observer1.  
BP3O1D: DBP second measurement taken by Observer1.  
BP3O2S: SBP second measurement taken by Observer2.  
BP3O2D: DBP second measurement taken by Observer2.  
BP5O1S: SBP third measurement taken by Observer1.  
BP5O1D: DBP third measurement taken by Observer1.  
BP5O2S: SBP third measurement taken by Observer2.  
BP5O2D: DBP third measurement taken by Observer2.  
BP7O1S: SBP fourth measurement taken by Observer1.  
BP7O1D: DBP fourth measurement taken by Observer1.  
BP7O2S: SBP fourth measurement taken by Observer2.  
BP7O2D: DBP fourth measurement taken by Observer2.  
BP2S: SBP first measurement given by Omron M7device.  
BP2D: DBP first measurement given by Omron M7device.  
BP4S: SBP second measurement given by Omron M7device.  
BP4D: DBP second measurement given by Omron M7device.  
BP6S: SBP third measurement given by Omron M7device.  
BP6D: DBP third measurement given by Omron M7device.
